No. 1.06e-44; 17 vrnngarnntnavvnnnhnnsyawawnrvgnavanavnangrannvdnrnvssnnngacs 76 for the prodn. of the protein, opt. after being mutated to produce MPRB analogues. The protein has a mol wt. of 115 kD (calculated Mr=114,952). The protein (or variants) can be used in treatment of natriuretic peptide disorders, and also to isolate peptides using affinity chromatography. Antibodies with affinity for NPRB can 9; Gaps The sequence was derived from the DNA encoding natriuretic peptide receptor B, NPRB, having guanyl cyclase (GC) activity and protein kinase activity. The DNA can be inserted into expression vectors Natriuretic protein receptor B - for diagnosis and treatment of kidney failure, heart failure, hyperaldosteronism, glaucoma etc. Claim 3; Fig 1; 49pp; English. Claim 3; Page 14; 23pp; English. Oligonucleotide probe MK14-A consists of nucleotides 5-95 of MK14 (Q51735). It hybridized to all spp. of mycobacteria tested, but cross reacted to a few non-mycobacterial spp. The probe may

be useful as an initial screen for mycobacterial infection. See also Q51735-45 and Q51747-59.

This fragment can be used for the preparation of a vaccine for hepatitis C. This fragment was prepared from the serum of non-A, non-B hepatitis patients and the envelope region DNA was amplified by PCR using the primer sequences given in 035073-76. Differential screening in NIH3T3 cells (ATCC CRL-1658) and cloning, then insertion into vector pUC118 gave plasmid pMC031 which contains the DNA coding for mouse OSF-1 (Q20695). This plasmid was used as a probe to clone by plaque hybridisation from a human cDNA library to gave a phage clone, HBR1. Insertion into vector pUC118 gave pHBR1 which may be used diagnostically or the OSF-1 cDNA

(GEHO) GEN HOSPITAL CORP. (FARH) HOECHST AG. 23-APR-1992; US-838221

Seed B, Stengelin S, Uhlmann E, Ulmer W; Habermann P,

WPI; 93-235119/29.

Fusion proteins for prodm. of e.g. pro-insulin - comprise gene for desired protein and oligo-nucleotide(s) encoding ballast

protein

Claim 9; Column 30; 22pp; English.
This preferred mixed oligonucleotide encodes a ballast constituent and is inserted between a regulatory region and the structural gene encoding a desired protein, esp. pro-insulin. The short ballast component improves protease resistance of the fusion protein while

still allowing the desired protein to adopt its correct conformation

prior to cleavage of the ballast constituent. Sequence 39 BP_i 1 A_i 11 C_i 1 G_i 11 C; 1 A;

1 T;

cDNA was ligated to Hind III adaptors (Pharmacia), digested with Not I and directionally cloned into the Not I and Hind III sites of the Lafmid BA vector. Library went through one round of normalization. Library constructed by Bento Soares and M.Fatima Bonaldo. human clone=25883 library=Soares infant brain 1NIB vector=Lafmid BA Rsite2-Hind III Whole brain from a 73 days post natal female. 1st strand cDNA was primed with a Not I - oligo(dT) primer [5' AACTGGAAGAATTTTTTTTTTTTTTTTTT 3']; double-stranded Eucaryotae; Metazoa; Chordata; Vertebrata; Gnathostomata; Mammalia; Eutheria; Primates; Catarrhini; Hominidae; Homo. .4%; Pred. No. 1.13e-02; 3; Indels 0; Gaps 0; yf55f05.rl Homo sapiens cDNA clone 25883 5' similar to gb:M10058 ASIALOGLYCOPROTEIN RECEPTOR 1 (HUMAN); This clone is available royalty-free through LLNL; contact the IMAGE Consortium (info@image.llnl.gov) for further information. 1 (bases 1 to 413)

                                                                                                                                                                                                            from the erythropoietin-producing himan hepatoma cell Hp-1. The cDNA library was screened using the probes given in N70361 and N70362. A plasmid (named as p58-A20) was isolated. The nucleotide sequence of the cDNA obtained from this clone is shown in N70360.

                                                                                                                                                                                                                                                                                                                                                      A recombinant plasmid vector expressing this clone is expressed in e. g 3T3 or GHO cell cultures. The produced erythropoietin is useful for treatment of anaemia, especially renal anaemia. The cloned gene expresses high levels of the protein and thus provides a means of mass production. The analogue was constructed to add an N-glycosylation site at Asn125 (amino acid 154 in this sequences) and was produced by expression of DNA obtained by site-directed mutagenesis of DNA encoding EPO. The analogue has a higher sialic acid content than

Claim 33, Page 45, 60pp; English
Claim 33, Page 45, 60pp; English
The [Asn]69 analogue was constructed to add an N-glycosylation site
at Asn69 (amino acid 96 in this sequences) and was produced by
CC expression of DNA obtained by site-directed mutagenesis of DNA
C encoding EPO. The analogue has a higher sialic acid content than
chuman EPO and has increased biological activity.
CC It can be used to treat mammals to cause bone marrow cells to
increase prodn. of reticulocytes and red blood
CC thereby increasing haematocrit levels.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
